THE INSTITUTE FOR COMMUNITY & PUBLIC HEALTH

Community Survey Design Toolkit

Templates & Toolkits · TOOLKIT · Version 1.0

A toolkit for designing accessible, unbiased community surveys that produce usable data.

Overview

This toolkit covers question design, accessibility, sampling, and consent for community surveys, with a bank of validated questions you can reuse.

What's inside

A set of practical tools you can use independently or together

- Checklists and templates for each stage of the work
- Facilitation notes for running sessions with your team
- An evaluation plan so you can measure impact

How to use it

Pick the tools that fit your context rather than working through everything mechanically. Run the facilitation sessions with the people who will deliver the work, and build the evaluation in from the start.

About this collection

This document belongs to the Templates & Toolkits collection of the ResourceVault library and is provided as a demonstration document for evaluation purposes.
