THE INSTITUTE FOR COMMUNITY & PUBLIC HEALTH

# Evaluating Public Health Interventions: Methods Primer

Research & Evidence · RESEARCH · Version 1.0

*A practical primer on choosing robust evaluation methods when randomised trials are not feasible.*

## Overview

Most public health interventions cannot be evaluated with a randomised trial. This primer walks through quasi-experimental and theory-based methods so teams can still produce credible evidence of impact.

## What's inside

A clear summary of the evidence and its strength
- Key findings translated into practical implications
- An honest appraisal of limitations and gaps
- A full reference list for further reading

## How to use it

Use the implications section to inform planning and commissioning conversations, and cite the references directly when you need to evidence a decision. Treat the limitations section as honestly as the findings.

## About this collection

This document belongs to the Research & Evidence collection of the ResourceVault library and is provided as a demonstration document for evaluation purposes.
