THE INSTITUTE FOR COMMUNITY & PUBLIC HEALTH

Hypertension Detection & Management in Community Settings

Clinical Guidelines · GUIDE · Version 1.0

Standardised blood pressure measurement, diagnostic thresholds, and stepped management for non-clinical settings.

Overview

Built for community health workers running opportunistic blood pressure checks, this guideline standardises measurement technique, diagnostic thresholds, and onward referral. It reduces unwarranted variation and helps teams identify undiagnosed hypertension earlier.

What's inside

A plain-language overview you can read in one sitting
- Step-by-step guidance with decision points called out
- Worked examples drawn from real community practice
- A one-page summary to keep at your desk

How to use it

Read it through once to orient yourself, then return to the relevant section when you need it. Share the one-page summary with colleagues who need the headlines rather than the detail.

About this collection

This document belongs to the Clinical Guidelines collection of the ResourceVault library and is provided as a demonstration document for evaluation purposes.
