THE INSTITUTE FOR COMMUNITY & PUBLIC HEALTH

Rapid Evidence Review: Social Prescribing Outcomes

Research & Evidence · RESEARCH · Version 1.0

A rapid synthesis of the current evidence base on social prescribing and its measurable health outcomes.

Overview

This rapid review summarises what the evidence does and does not tell us about social prescribing, with an honest appraisal of study quality. It is intended to inform commissioning conversations rather than to overstate the case.

What's inside

A clear summary of the evidence and its strength
• Key findings translated into practical implications
• An honest appraisal of limitations and gaps
• A full reference list for further reading

How to use it

Use the implications section to inform planning and commissioning conversations, and cite the references directly when you need to evidence a decision. Treat the limitations section as honestly as the findings.

About this collection

This document belongs to the Research & Evidence collection of the ResourceVault library and is provided as a demonstration document for evaluation purposes.
