THE INSTITUTE FOR COMMUNITY & PUBLIC HEALTH

Tuberculosis Contact Tracing Standard

Clinical Guidelines · GUIDE · Version 1.0

Standard operating guidance for prioritising and managing TB contacts after an index case is confirmed.

Overview

This standard sets out the concentric-circle approach to TB contact tracing, prioritisation of close contacts, and the timelines members are expected to work to. It aligns local practice with national communicable disease control expectations.

What's inside

A plain-language overview you can read in one sitting
• Step-by-step guidance with decision points called out
• Worked examples drawn from real community practice
• A one-page summary to keep at your desk

How to use it

Read it through once to orient yourself, then return to the relevant section when you need it. Share the one-page summary with colleagues who need the headlines rather than the detail.

About this collection

This document belongs to the Clinical Guidelines collection of the ResourceVault library and is provided as a demonstration document for evaluation purposes.
